Experience

Founding Engineer Intern **Jun. 2026 – Present**
GutGutGoose (YC S'26) *San Francisco, CA*
- Built and trained machine-learning models on clinical and longitudinal health datasets to predict Parkinson's risk and broader chronic-disease indicators, owning preprocessing, feature engineering, model selection, and evaluation in Python.
- Developed reproducible training pipelines with cross-validation, class-imbalance handling, calibration, and SHAP-based explainability; packaged inference behind FastAPI endpoints for integration into product workflows.
- Automated model retraining and evaluation workflows with AWS S3, SageMaker, Lambda, and Step Functions, including dataset versioning, scheduled runs, drift checks, and deployment-ready model artifacts.

Forward Deployed Engineer Intern **Apr. 2026 – Jun. 2026**
Blaze (YC S'24) *San Francisco, CA (Remote)*
- Worked directly across product and engineering to ship agentic-finance integrations in TypeScript/Python, including an Agent Brief API listed on agentic.market with x402 payments for autonomous per-request purchasing and service discovery.
- Built cross-border payment workflows that normalized quotes, payment intents, wallet/network metadata, settlement events, retries, idempotency, and webhook state behind typed APIs for agent-driven transactions.
- Created internal automation for partner onboarding, transaction reconciliation, and workflow triage using AWS Lambda, API Gateway, Step Functions, EventBridge, SQS, Bedrock, and CloudWatch; also shipped an agentic content pipeline with FFmpeg and publishing adapters.

Backend & AI Engineering Intern **Feb. 2026 – Apr. 2026**
Venu AI (YC W'21) *San Jose, CA (Remote)*
- Automated end-to-end conference operations with Python, Django, React, Azure Functions, Service Bus, Blob Storage, and Container Apps, replacing manual coordination with event-driven workflows and internal tooling.
- Built LLM-powered personalized outreach and semantic attendee/sponsor matchmaking; instrumented backend services with Application Insights and productionized integrations through Azure APIs and background workers.

AI Agent Developer Intern **Oct. 2025 – Jan. 2026**
NeuralSeek AI *Miami, FL (Remote)*
- Shipped a production AI agent on AWS for the mAIstro Challenge with 100% on-time milestone delivery; designed triage, execution, and review agents with parallel reasoning and fallback handling.
- Reduced average task resolution time by approximately 40% and improved response accuracy by approximately 30% across evaluation benchmarks through iterative prompt, tool-routing, and orchestration changes.

Projects

OraxAI | *React, FastAPI, Python, OpenAI API, Docker* | oraxai.ca **Jan. 2026 – Present**
- Built an end-to-end AI resume-tailoring platform with ATS scoring, a React frontend, FastAPI services, and LLM workflows; grew to 100+ monthly active users and $2K+ MRR through product iteration and organic distribution.

Lyric Engine | *Python, Llama 3.1, LoRA, Beam Search* **2025**
- Built a phonetic-aware generation system with dual BPE + ARPAbet tokenization, genre-specific LoRA adapters, and constrained beam search for rhyme, syllable count, and emotional arc.

Education

University of Waterloo **Aug. 2026 – Present**
BASc, Electrical Engineering *Waterloo, ON*

Maisonneuve College **Feb. 2024 – Jan. 2026**
Diploma of College Studies, Pure & Applied Sciences *Montreal, QC*

Technical Skills

Languages: Python, TypeScript, JavaScript, C++, SQL, Verilog
AI / Backend: FastAPI, Django, Node.js, PyTorch, Hugging Face, OpenAI API, Amazon Bedrock, scikit-learn, XGBoost
Cloud / Infra: AWS Lambda, API Gateway, Step Functions, EventBridge, SQS, S3, SageMaker, CloudWatch; Azure Functions, Service Bus, Blob Storage, Container Apps, Application Insights; Docker, Git

Awards & Recognition

Mathematics Olympiad Finalist – Casablanca, Morocco | Pratt & Whitney – AI Integration in Computing Systems (2025) | Bombardier – Training & Development (2025)
