EXPERIENCE

Founding Engineer Intern

June 2026 – Present

GutGutGoose (YC S'24)

San Francisco, CA

- Developed machine learning algorithms to match customer DNA and genomic markers against curated reference microbiome datasets to power personalized probiotic recommendations.
- Built computational biology data pipelines in Python for sequence comparison and similarity scoring between user genetic profiles and a reference strain library.
- Worked across the ML and scientific software engineering stack as a founding engineer, from data ingestion through model evaluation, supporting a computational-biology-driven personalization engine.

AI Infrastructure Engineer Intern

Apr. 2026 – June 2026

Blaze (YC S'24)

San Francisco, CA (Remote)

- Built an Agent Brief API (Node/TypeScript) registered on agentic.market, transforming raw text into structured JSON briefs for AI agents, with x402 payment integration for per-request monetization and Bazaar discovery.
- Architected a Remotion-based vertical video generation system (1080 x 1920) producing iMessage-style marketing videos with three script compositions and a hosted Express API for on-demand MP4 rendering.
- Engineered a multi-stage agentic viral video pipeline in Python with ingestion, compliance gating, FFmpeg transcoding, caption generation, and Postiz publishing adapters for TikTok and Instagram Reels.

Backend & AI Engineering Intern

Feb. 2026 – Apr. 2026

Venu AI (YC W'21)

San Jose, CA (Remote)

- Automated end-to-end conference production workflows using Python, Django, and React on Microsoft Azure, reducing manual coordination overhead across event pipelines.
- Built an AI-powered personalized email outreach system integrating LLM-generated content with CRM data to drive top-of-funnel sales for founders and conference stakeholders.
- Developed a React matchmaking feature pairing attendees, speakers, and sponsors via semantic similarity; designed and maintained scalable Azure backend services (Functions, Blob Storage, Service Bus).

AI Agent Developer Intern

Oct. 2025 – Jan. 2026

NeuralSeek AI

Miami, FL (Remote)

- Shipped a production AI agent on AWS completing the mAIstro Challenge with 100% on-time delivery across all milestones.
- Designed a multi-agent pipeline with triage, execution, and review stages, cutting average task resolution time by approximately 40% through parallelized reasoning and fallback handling.
- Ran 3+ design iterations on competitive research findings, improving agent response accuracy by approximately 30% on evaluation benchmarks.

PROJECTS

OraxAI | *React, FastAPI, Python, OpenAI API* | oraxai.ca

Jan. 2026 – Present

- Built an end-to-end AI resume tailoring platform: designed the ATS scoring engine, React frontend, and FastAPI backend; iterated on live user research and demos.
- Grew to 100+ monthly active users and \$2K+ MRR through SEO and organic social growth to 10K+ followers and 1M+ views.

Lyric Engine | *Python, Llama 3.1, LoRA, Beam Search* | [github](https://github.com)

2025

- Phonetic-aware lyrics generation system with a dual BPE + ARPabet tokenizer and genre-specific LoRA adapters with runtime blending.
- Constrained beam search enforcing rhyme, syllable count, and emotional arc during generation.

EDUCATION

University of Waterloo

Aug. 2026 – Present

BASc Electrical Engineering

Waterloo, ON

Maisonneuve College

Feb. 2024 – Jan. 2026

Diploma of College Studies, Pure & Applied Sciences

Montreal, QC

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++, SQL, Verilog

Frameworks & Tools: React, FastAPI, Django, Node.js, AWS, Microsoft Azure, Docker, Git, PyTorch, Hugging Face, OpenAI API, Amazon Bedrock, Remotion

Spoken Languages: English, French, Arabic (all fluent)

AWARDS & RECOGNITION

Mathematics Olympiad Finalist – Casablanca, Morocco

Micro-internship, Pratt & Whitney – AI Integration in Computing Systems (2025)

Micro-internship, Bombardier – Training & Development (2025)
